Self Definition

I'm an enthusiastic junior full-stack developer with a passion for continual learning. I'm known for my sociable and helpful nature, which extends beyond the workplace to my personal life. I maintain a range of hobbies and thrive on a consistently active lifestyle.
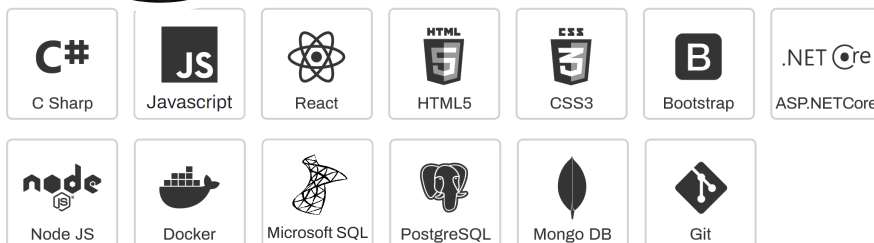

Strength

Fueling my passion for frontend development, I specialize in designing modern web applications with React.js. Furthermore, I have a knack for crafting Web APIs with ASP.NET Core, leveraging the power of C# to seamlessly merge the worlds of design and functionality.

Mentor Opinion

"Ildikó is one of my personal mentees, and I'm sure she is one of our exceptional students. Her diligence and organizational skills are truly commendable. With a solid grasp of both the C# language and ecosystem, as well as the React library, her technical knowledge is imposing. Throughout the course, Ildikó was a model of accountability. Whenever she faced challenges, she proactively sought help, demonstrating a high degree of empathy and understanding. Not only that, but she also extended her support to her peers, showing a proactive and collaborative spirit. She was consistently punctual and demonstrated great time management skills. Moreover, her ability to articulate technical concepts is exceptional. I have no doubt that Ildikó is on a fast track to becoming an outstanding software developer. Her combination of technical proficiency, excellent communication, and proactive approach to problem-solving make her a valuable asset to any team."

— Barnabás Pakay, mentor

Hard Skills

C Sharp	Javascript	React	HTML5	CSS3	Bootstrap	ASP.NETCore
Node JS	Docker	Microsoft SQL	PostgreSQL	Mongo DB	Git	

Recent Projects

FOOD IMPORT LABEL GENERATOR

https://github.com/mayu0126/food-import-label-generator
With this web application you can create Hungarian labels for your imported food products by providing the English text, and you can enhance the quality of each label. Leveraging translations derived from the most recent EU and local Hungarian regulations, it ensures accuracy and legal compliance.

SOLARWATCH

https://github.com/mayu0126/solarwatch
SolarWatch is a simple application designed to deliver precise sunrise and sunset information for a specified city. The app saves the data that has already been queried from the external API to its own database for future usage. Enjoy accurate sunrise and sunset data for your favorite cities!

THE EVERYTHING

https://github.com/SSzabolcs-glitch/The-Everything-App
The Everything is one of our school teamworks in which I was responsible for mainly the frontend of the application. It is a website where you can access top-quality tools for your DIY and home improvement projects, available for both rental and purchase. If you're a new user, you can easily register and place an order.

Work Experience

Central European Artwork Technologist (2018 - 2022) — TESCO-GLOBAL Áruházak Zrt.
Marketing Intern (2015 - 2015) — Sky Marketing Communications Kft.
Cashier (2010 - 2010) — PAUL French Family Bakery and Patisserie since 1889

Education

Full Stack Developer (2022 - 2023) — Codecool
Food Engineer MSc. (2016 - 2018) — Szent István University
Food Engineer BSc. (2012 - 2015) — Corvinus University of Budapest
Photographer (2011 - 2012) — Budai Drawing School
Graphic Designer (2006 - 2011) — Eventus Business and Art High School
